Integral Universal Substation Processor

Integral Universal Substation Processor is a modular logic controller and communication gateway. The base unit includes the main processor, an
integrated slot for a 4G modem, and two Ethernet ports. In addition, the modular section provides six slots for
Integral Modules, allowing flexible configuration for different types of communication.

• Six module slots
• 4G modem ready
• Two 10/100 Mbps Ethernet RJ45 ports
• Web interface Actiweb9
